

Migration of Users'  
Mailboxes & Data from  
GoDaddy Subscribed  
Office 365 tenant to  
Microsoft Office 365  
CSP Tenant

## About Customer: Jomi Engineering Group

Jomi Engineering Group is a Canada based engineering resources company that specializes in manufacturing effectiveness improvements.

13+ years of business presence in the manufacturing and supply chain span, it is enabling its customers with the product launch life cycle or breakdown and serving as manufacturing growth partner while utilizing technical resources.

Jomi Engineering Group specializes in overall equipment effectiveness (OEE), process automation, lean development and manufacturing effectiveness improvements.

## Solution

### Technical Challenges

Jomi Engineering Group was utilizing Office 365 by Microsoft to collaborate and consolidate data in various formats but at a same location. While leveraging Office 365 solution, they were facing challenges in overcoming the data migration limitation present in Office 365, wherein they were not able use the same domain in two different tenants at the same time. i.e., GoDaddy Subscribed Office 365 tenant and Microsoft Office 365 CSP Tenant. So, they were facing challenges in migrating the data as the source of the data was Office 365 and the destination for the data was also Office 365.

We helped Jomi Engineering group in overcoming the data relocation challenge by migrating all users' mailboxes & data from GoDaddy Subscribed Office 365 tenant to Dropbox to Microsoft Office 365 CSP Tenant in a seamless manner while upgrading their Windows 10 Home Edition to Enterprise by leveraging Microsoft 365 E3 licensing capabilities. For which, we also included joining all Windows 10 devices to Azure Active Directory & managing them using Intune MDM.

Here are the steps we followed to ensure seamless migration:

- Installed Professional Edition of OS with updated Windows 10 build (Release Version) to join Windows 10 Devices to Azure Active Directory as all windows devices are running with Home Edition
- Set up Microsoft 365 CSP Tenant and provisioning of all users, aliases, Office 365 groups, distribution lists, shared mailboxes & licenses
- Email & Data Migration
- Setting up Users Workstations, Apple MacBook, iOS & Android Devices
- Configuration of Office 365 Backups

### Platform used:

### Accomplishment:

- The migration of all users' mailboxes & data from GoDaddy Subscribed Office 365 tenant & Dropbox to Microsoft Office 365 CSP Tenant helped Jomi engineering group with efficient data consolidation and transfer.
- As their systems had all the windows devices running with Home Edition, our team installed Professional Edition of OS with updated Windows 10 build (Release Version) to join Windows 10 Devices with Azure Active Directory
